

# IT workshops

## Community Project

February 09th, 2018

In year three of the MYP programme the students are obliged to complete the Community Project. As the Community Project I have chosen to actively participate in educating MYP students about some computer programs. For that purpose I am planning to **organise a series of IT workshops for MYP0 students** with a goal of expanding their knowledge. MYP0 students will be taught about MS Office (Word; Power-Point), web tools (Prezi - online presentation tool; Wix - free website builder) and some coding programs. I have already carried out a survey among MYP0 students in order to assess their level of knowledge, to find out their interests and to prepare myself better for the IT workshops.

The first workshop held on February 9th was a success - the MYP0 students eagerly participated and what is the most important for me, look forward to our next IT workshop.

*Matej (MYP3)*
